FOR IMMEDIATE RELEASE

**SUBJECT: Analysts, Inc. announces that their National Sales Manager, Cary Forgeron, is the industry's youngest individual to earn the Certified Lubricants Specialist (CLS®) certification.**

TORRANCE, CA — September 20, 2008. Analysts Incorporated—the acknowledged leader in oil analysis services since 1960—can now add one more item to the list of accomplishments that distinguish their company from all others: their National Sales Manager, Cary Forgeron, holds the distinction of being the industry's youngest person to earn the coveted CLS® certification from the Society of Tribologists and Lubrication Engineers (STLE). An accomplishment that is all the more impressive considering the fact that only one in four STLE members holds an STLE certification.

**The Leader for a Reason.**

Cary Forgeron's recent CLS® certification spotlights one of the fundamental reasons why Analysts is recognized as the leader in oil analysis. Simply stated, they possess nearly four times the level of diagnostic expertise as their nearest competitor. "Without question, knowledge is one of the key factors that sets us apart," states Analysts' National Sales Manager, Cary Forgeron. "And in this business, knowledge is measured in the form of STLE certificates. Some labs have one STLE certificate. One lab has four. Analysts holds 15 STLE certificates—nearly four times more than any other oil analysis company."

Nine CLS® certificates—the highest certification level available—hang proudly on the wall behind the professionals charged with the responsibility of understanding and interpreting the analytical data they receive. With over a century of combined diagnostic experience between them, these are the best minds in the industry. Knowledge combined with experience—this is what sets Analysts apart. This is what keeps them at the forefront of their industry.

**About Analysts, Inc.**

**The Acknowledged leader in Oil analysis since 1960.** Analysts, Inc. virtually pioneered the oil analysis industry. And from its inception they have remained the number one innovator in technology services and new product development. As the leading force in oil analysis, they are recognized as the premiere provider of industrial diagnostic evaluations and maintenance solutions. Analysts' services cover an entire spectrum of industries, including production machinery, manufacturing equipment, power generation, marine, heavy construction, mining, trucking, transit, and aircraft industries. As an independent analytical testing organization, Analysts operates five regional laboratories in the U.S. (Torrance, California; Oakland, California; Chicago Illinois; Louisville, Kentucky; Atlanta, Georgia; Houston, Texas) as well as labs in Tokyo, Japan and Monterrey, Mexico. The company's services, allow equipment owners to see the "what, when, where and why" of events happening inside any lubricated component. Armed with the best analytical data and professional recommendations, Analysts' services help industry managers to plan maintenance schedules, prevent premature equipment wear, and maximize uptime.
